

Student Exam and Answer

Course Name : REST API Development

Exam ID : 62

| Question |
|--|
| Which component manages the operations of all hardware and software in a computer system? |
| What is the advantage of using an SSD over an HDD? |
| Which application software is commonly used to manage large amounts of structured data? |
| How does a router differ from a switch in networking? |
| Which protocol ensures secure data transfer over the internet? |
| In programming, what is the role of a loop? |
| What does a URL identify in a web browser? |
| Which hardware device converts sound into digital signals? |
| Why is it important to update antivirus software regularly? |
| Which shortcut key allows you to quickly find text in a document? |
| What is the function of the Control Panel in Windows operating systems? |
| How is a computer worm different from a Trojan horse? |
| Which device expands the number of available USB ports? |
| What is a data packet in networking? |
| Which key combination locks your computer immediately in Windows OS? |
| Which type of printer produces high-quality images using toner? |
| What is the purpose of a subnet mask in networking? |
| What does SaaS stand for in cloud computing? |
| What is a device driver used for in a computer system? |
| How does an IP address differ from a MAC address? |
| Which technology allows multiple devices to share a single internet connection wirelessly? |
| What is latency in computer networks? |
| Which file format is widely used for compressed images? |
| What does DNS translate in a network request? |
| What is an example of an open-source operating system? |
| How is bandwidth measured in a computer network? |
| What is a biometric authentication method? |
| Which component enhances a computer's graphics performance? |

| What is the advantage of using an SSD over an HDD? |
| Which application software is commonly used to manage large amounts of structured data? |
| How does a router differ from a switch in networking? |
| Which protocol ensures secure data transfer over the internet? |
| In programming, what is the role of a loop? |
| What does a URL identify in a web browser? |
| Which hardware device converts sound into digital signals? |
| Why is it important to update antivirus software regularly? |
| Which shortcut key allows you to quickly find text in a document? |
| What is the function of the Control Panel in Windows operating systems? |
| How is a computer worm different from a Trojan horse? |
| Which device expands the number of available USB ports? |
| What is a data packet in networking? |
| Which key combination locks your computer immediately in Windows OS? |
| Which type of printer produces high-quality images using toner? |
| What is the purpose of a subnet mask in networking? |
| What does SaaS stand for in cloud computing? |
| What is a device driver used for in a computer system? |
| How does an IP address differ from a MAC address? |
| Which technology allows multiple devices to share a single internet connection wirelessly? |
| What is latency in computer networks? |
| Which file format is widely used for compressed images? |
| What does DNS translate in a network request? |
| What is an example of an open-source operating system? |
| How is bandwidth measured in a computer network? |
| What is a biometric authentication method? |
| Which component enhances a computer's graphics performance? |

| What is asymmetric cryptography? |
| What is DNS over HTTPS (DoH)? |
| What is a distributed file system? |
| What is an air-gapped system? |
| What is system patching? |
| What is the difference between hashing and encryption? |
| What is a phishing attack? |
| What is network address translation (NAT)? |
| What is an SSL certificate? |
| What is a DNS cache poisoning attack? |
| What is application whitelisting? |
| What is the role of a data lake? |
| What is SQL injection? |
| What is cloud orchestration? |
| What is endpoint vulnerability scanning? |
